Forward looking statements

Some of the statements in the White Paper include forward-looking statements which reflect the Company's and/or the Management current views with respect to product development, execution roadmap, financial performance, business strategy and future plans, both with respect to the Company and the sectors and industries in which the Company operates. Statements which include the words "expects", "intends", "plans", "believes", "projects", "anticipates", "will", "targets", "aims", "may", "would", "could", "continue" and similar statements are of a future or forward-looking nature. All forward-looking statements address matters that involve risks and uncertainties. Accordingly, there are or will be important factors that could cause the actual results to differ materially from those indicated in these statements. These factors include but are not limited to those described in part of the White Paper, which should be read in conjunction with the other cautionary statements that are included in the White Paper and terms and conditions. Any forward looking statements in the White Paper reflect the current views with respect to future events and are subject to these and other risks,

uncertainties and assumptions relating to the operations, results of operations and growth strategy. These forward looking statements speak only as of the date of the White Paper. Subject to industry acceptable disclosure and transparency rules and common practices, the Company undertakes no obligation publicly to update or review any forward-looking statement, whether as a result of new information, future developments or otherwise. All subsequent written and oral forward-looking statements attributable to the Company or individuals acting on behalf of the Company are expressly qualified in their entirety by this paragraph. Prospective buyers of the SilverBit Token should specifically consider the factors identified in the White Paper which could cause actual results to differ before making a purchase decision. No statement in the White Paper is intended as a profit forecast and no statement in the White Paper should be interpreted to mean that the earnings of the Company for the current or future years would be as may be implied in this White Paper. No information contained in this white paper should be considered as a promise, representation of commitment or undertaking as to the future performance of the SilverBit token, or any other component of the SilverBit ecosystem. By purchasing the SilverBit token I hereby acknowledge that I have read and understand the notices and disclaimers provided.

Intro

Blockchain technology has come as a liberating tool that has the potential to take humanity to the next level. From the concept of a decentralized global currency to smart contracts and zero knowledge technology, blockchain tech is sure to change the world in the next decade. However, there are certain problems that can be solved today with the existing technology, a prospect that can kickstart mainstream cryptocurrency adoption.

Bitcoin launched at a time when the general public was ill-informed about cryptocurrency. Since Bitcoin was generally only used by the tech-savvy, most people continued using fiat currency, which is government-backed and inconvertible. Bitcoin has since risen in value from pennies per-unit to over \$11,000. This change indicates a currency paradigm shift: the general public is beginning to realize the benefit of cryptocurrencies over fiat money. We're reminded of the rapid growth of the internet in the nineties as a parallel. Blockchain technology, which is fundamental to cryptocurrencies, is changing how individuals and corporations conduct transactions. Namely, local and global transactions are faster and more economical than traditional transfers that use banks or other financial institutions. This is how these transactions work: everyone is recorded on a

type of public ledger called a blockchain, which is then independently verified by multiple, separate parties to ensure legitimacy. These parties, which are called nodes, determine transaction legitimacy through consensus. While the ledger itself is public, there is a mechanism to protect the identity of each individual account, or wallet. Each wallet is linked to a public identification number, while the owner of the account remains anonymous. Bitcoin was the first digital currency to use blockchain technology; however, for technical reasons, it is extremely difficult to build another currency off of that platform. SilverBit is built on the Ethereum blockchain platform, which is designed for the creation and implementation of digital tokens. Ethereum allows for the creation of small programs that control a token's digital functions: these programs are called smart contracts, and they allow for predetermined, autonomous tasks to be executed only once certain, predetermined parameters are met. Since the parameters are outlined during development, these tasks function automatically to prevent tampering. This is the platform we have used to create SilverBit token, a new class of digital token with greater price stability and tangible value.

Silver as a Store of Value

For thousands of years, silver has maintained a positive market demand as an investment, currency and store of value. Silver's market demand is still dominated by bullion coins, industrial products and jewelry. This precious metal also features in the stock exchange as a traded product. There is a higher industrial demand for silver when compared to its biggest competitor, gold. Experts have indicated that industrial applications are increasing at a very high rate and the demand and price for silver is increasing.

Investors buy silver coins, silver bullion coins, and silver bars for one of three purposes: as an investment, as an inflation hedge, or for survival purposes. Investors who buy for investment purposes look for price increases because of *silver's supply/demand fundamentals*. For example, in 1998 Warren Buffett purchased 129.7 million ounces of silver for Berkshire Hathaway, a holding company that Buffet

heads. Buffett's silver purchase, which became legendary among silver investors, was for investment purposes. Investors buy silver as protection against inflation. During the 1970s, silver prices skyrocketed in response to price inflation that reached 13%. Silver, like all precious metals, may be used as a hedge against inflation, deflation or devaluation. As Joe Foster, portfolio manager of the New York-based Van Eck International Gold Fund, explained in September 2010: "The currencies of all the major countries, including ours, are under severe pressure because of massive government deficits. The more money that is pumped into these economies – the printing of money basically – then the less valuable the currencies become." Investors also buy silver for survival purposes because they may fear the worst. Those fears include the Federal Reserve printing so many dollars that the dollar will become worthless, which is the history of all paper currencies not redeemable in gold or silver. Fear of a financial meltdown, which would close banks as in Argentina and Paraguay in 2002, is another.

Argentines and Paraguayans who had to foresight to bail out of the banking systems and convert their assets to gold or coin silver were protected. Not only did banks close, but also when they reopened depositors were limited in the amount of money they could withdraw. Meanwhile, the Argentinean *peso* and the Paraguayan *guarani* sank in value. Shortly after those crises, Brazil defaulted on its international debt and its paper currency, the *real*, sank.

Precious metals such as silver act as a reliable store of wealth. That's true because silver exist in finite quantities and have inherent properties with real value. It's no coincidence that silver has been recognized as a medium of wealth by virtually every civilization in the world over thousands of years. On the other hand, unlike silver, a fiat currency (like today's US dollar) has no inherent intrinsic value. *Nada*. None. Zilch. And although fiat currencies efficiently facilitate commerce by acting as a medium of exchange that is far preferable to bartering — just like silver does — their value is based purely on faith. Of course, the biggest downside to fiat currencies is that they can be created out of thin air with impunity, as the Federal Reserve has been doing to the US dollar lately with alarming frequency. Over time, excessive money printing greatly diminishes the value of the currency and the resulting effects can be seen via price inflation. If things get *too* out of hand, then

faith in the currency begins to wane and hyperinflation rears its ugly head, which typically leads to the death of the currency and a painful economic collapse.

What is SilverBit?

SilverBit is a digital token that allows people to send money anywhere in the world instantly, securely and at near zero cost. It focuses on creating a multi entry, high rewards monetary system that empowers people to achieve financial freedom through blockchain based technology. SilverBit’s conceptual goal is to become an ultra-scarce non-government controlled storage of wealth with software facilities to increase that wealth over time and that is an instantly transferable asset with zero storage cost. There will only be 7.5 million SilverBits created making this one of the most scarce crypto tokens.

Earning Interest / Staking & Specifications

SilverBit uses a Proof-of-Stake algorithm. In simple terms, coin holders could earn some extra coins just by holding some coins for a period of time in the Proof-of-Stake system. To ordinary users, this is the biggest difference between Proof-of-Stake and Proof-of-Work. Now, SilverBit first implements the Proof-of-Stake mechanism as an Ethereum Token. Holders of SilverBit can get revenues by holding SilverBit for a period of time greater than or equal to the minimum coin age.

Year	Annual Token Rate	Total Supply after
1	50%	3,375,000
2	35%	4,556,250
3 thru 5	25%	5,695,312
6 & beyond	25% then gradually decreasing each year	7,500,000

The ability to stake or earn extra tokens for holding SilverBit has an estimated implementation of 3 to 4 months after the conclusion of our ICO. This is to encourage early contributors to hold onto their tokens to help avoid liquidation when SilverBit starts trading on crypto exchanges and will also allow our team to pinpoint a specific start month for commencement of the staking mechanism.

Specifications:

Name: SilverBit

- Symbol: SLV
- Decimals: 8
- Maximum Total Supply: 7,500,000
- Initial Supply: 2,250,000
- Minimum Coin Age: 3 Days
- Maximum Coin Age: 90 Days

Striving for Deflation

Reduction of money supply is a countermeasure to inflationary devaluation. The scarcer the supply, the suppliers can demand higher prices for the commodity. Conversely, the more abundant the supply, the cheaper the commodity. After SilverBit reaches Year 6 there will be a long period of slowly decreasing annual interest rate. That is why SilverBit Team will aim at creating conditions that lead to deflation in the monetary system. This will be achieved through a feature called Treasure Hunting that involves burning coins. Burning coins is about sending them to an address which is unspendable; an address that has not derived from a private key but was rather generated manually. Treasure Hunting will give ability to search for Unspent Transaction Outputs (UTXO) that was inactive for 5 years and claim part of their balance as a reward while the rest of the coins are burned. An address that has outputs of at least 5 years old qualify to be treated as 'lost coins' where the owner no longer has access to them, could be either through lost passwords, coins sent to wrong address or any other misfortune. As a transaction is time stamped every time the coins are moved, the counter towards 5 year check automatically resets. Active participants who utilize SilverBit or actively support the network by staking coins by definition reset their SilverBit clocks proving the coins are not lost.

For long term holders there would be self check safeguards at wallet startup that provide easy one click solution to extend shelf life of coins for another 5 years. Also, a single UTXO of 10,000 SilverBit will be immune to Treasure Hunting as this coin pile size is reserved for SilverBit Masternodes and as such can be used as an endless secure cold storage. This feature will create a situation where more coins are removed from the circulation than are added to it through regular network reward system. Another positive aspect of this feature would be incentivizing people to pay more attention to their tokens and encourage in active participation of securing the network. The technical details of how this feature will work are going to be published closer to the software release date. If Treasure Hunting feature alone is not enough to keep SilverBit forever from reaching a total 7,500,000 coins, there will be an array of services and apps which will require burning SilverBit which will ensure the total number of coins is never reached.

Much like the precious metal Silver is a store of value, wealth creator and a hedge against the devaluation of fiat currency, SilverBit's aim is to be sort of a digital Silver. By keeping a low finite supply by only issuing a certain number of SilverBit tokens it stays scarce, which helps increase its demand and value. Much like Bitcoin, SilverBit is a token system intended to become a widely accepted way of storing and exchanging value. As such, it needs to offer scarcity, divisibility, verifiability, portability, and fungibility. Ultra FAST. Ultra SCARCE. Ultra SECURE. Ultra VALUABLE.

SilverBit Blockchain

SilverBit token is forged with Proof of Stake. Proof-of-stake (PoS) is a type of algorithm by which a cryptocurrency blockchain network aims to achieve distributed consensus. In PoS-based cryptocurrencies the creator of the next block is chosen via various combinations of random selection and wealth or age (i.e. the stake). In contrast, the algorithm of proof-of-work (PoW) based cryptocurrencies (such as bitcoin) uses computationally intensive puzzles in order to validate transactions and

create new blocks (i.e. mining) Proof of stake is a different way to validate transactions based and achieve the distributed consensus. It is still an algorithm, and the purpose is the same of the proof of work, but the process to reach the goal is quite different. Proof of stake first idea was suggested on the bitcointalk forum back in 2011, but the first digital currency to use this method was Peercoin in 2012, together with ShadowCash, Nxt, BlackCoin, NuShares/NuBits, Qora and Nav Coin. PosToken was the world's first Proof-of-Stake smart contract token on Ethereum platform. It's an ERC20 Token which follows the ERC20 Token Standard and implements all standard methods. Unlike the proof-of-Work, where the algorithm rewards miners who solve mathematical problems with the goal of validating transactions and creating new blocks, with the proof of stake, the creator of a new block is chosen in a deterministic way, depending on its wealth, also defined as stake. Also, all the digital currencies are previously created in the beginning, and their number never changes. This means that in the PoS system there is no block reward, so, the miners take the transaction fees. This is why, in fact, in this PoS system miners are called forgers, instead. Thanks to a PoS system validators do not have to use their computing power because the only factors that influence their chances are the total number of their own coins and current complexity of the network.

Pos provides the following benefits:

- 1- Energy savings;
- 2- A safer network as attacks become more expensive: if a hacker would like to buy 51% of the total number of coins, the market reacts by fast price appreciation.

Pre-Sale

The pre-sale round will provide an early opportunity to loyal contributors to join in prior to the full ICO. During presale tokens are distributed in a first come first served basis. Each stage will last until all available tokens are sold out, then next stage will automatically begin.

Stage 1: (next stage automatically begins once coins from previous stage are sold out)

250,000 SLV available 1 ETH = 1500 SilverBit

Stage 2:

500,000 SLV available 1 ETH = 1250 SilverBit

Stage 3:

500,000 SLV available 1 ETH = 1000 SilverBit

ICO

The ICO will last at least 4 weeks or until all coins are sold out, closing the moment the tokens are sold out. During the round, the tokens are distributed in a first-come first-served basis.

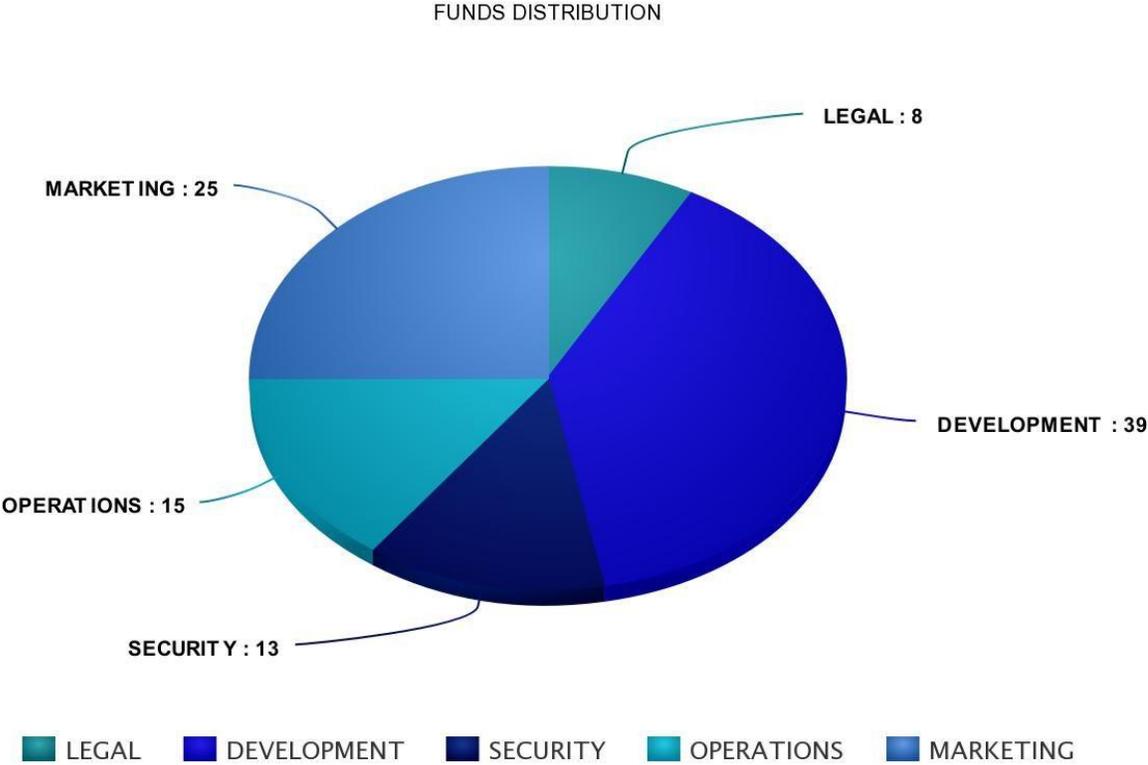

1,000,000 SLV available 1 ETH = 750 SilverBit 2,250,000

Token Acquisition

The SilverBit Token initial distribution will be in the form of a presale followed by an ICO. Anyone will be able to acquire SilverBit at a discount rate during the presale. SilverBit tokens can be acquired by pledging Ether into the contribution address provided on Buy Tokens page of silverbit.co website. Tokens will be distributed on a first come first served basis. Those with other cryptocurrencies such as BTC or LTC can contribute by following instructions on the Buy Tokens page of silverbit.co website. When contributing with ETH you will receive SilverBit in your ether wallet address you send funds from within 24 hours of sending ETH. Those contributing BTC or LTC will receive SilverBit within 48 hours of sending contribution to the ether wallet address you provide. The founding team will receive

a 10% allocation of SilverBit, subject to a 2 year holding period. These tokens will serve as long term incentive for the SilverBit founding team.

ICO Funds Distribution

Roadmap

The future

Blockchain technology develops at an accelerating pace with every passing year and SilverBit is adapting to constantly changing technological and market landscape. To stay compatible and have ongoing access to the wealth of technological advancements SilverBit will adopt industry standards necessary to incorporate solutions and components that would be beneficial to the future of SilverBit. Any new feature that has been time tested and would add value to the coin could and would be implemented. The development on SLV SilverBit Core software will continue throughout the future and will come in several stages. Every new release will add new features to the platform, increase processing power and scalability of the network. For SilverBit security is paramount that is why further development of the software will lead to significant improvements in that area. Quantum computing is real and it could soon become the biggest threat to security and integrity of all cryptocurrencies. For coins that are based on Proof of Stake algorithm this is a particularly important issue as the addresses there are reused a lot which weakens overall security of a private key. To mitigate this risk and increase protection of private keys, SilverBit will research the best suitable defense against quantum computer attacks and implement it as soon as it is available.

Disclaimer

PLEASE READ THIS DISCLAIMER SECTION CAREFULLY. IF YOU ARE IN ANY DOUBT AS TO THE ACTION YOU SHOULD TAKE, YOU SHOULD CONSULT YOUR LEGAL, FINANCIAL, TAX, OR OTHER PROFESSIONAL ADVISOR(S) This notice applies to all persons who read this document. Please note this notice may be altered or updated. This document is for informational purposes only and does not constitute an offer or solicitation to sell shares or securities in SilverBit or any related or associated company. Any such offer or solicitation will be made only by means of a confidential offering memorandum and in accordance with the terms of all applicable securities and other laws. Contributors are advised to read this document carefully in full and perform due diligence on their own.

The information set forth below may not be exhaustive and does not imply any elements of a contractual relationship. While we make every effort to ensure that any material in this White Paper is accurate and up to date, such material in no way constitutes the provision of professional advice. We make no guarantee, and accept no legal liability whatsoever arising from or connected to, the accuracy, reliability, currency, or completeness of any material contained in this white paper. Investors and potential SilverBit Token holders should seek appropriate independent professional advice prior to relying on, or entering into any commitment or transaction based on, material published in this white paper, which material is purely published for reference purposes alone. SilverBit Tokens will not be intended to constitute securities in any jurisdiction. This White Paper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities in any jurisdiction. The White Paper has been prepared solely in respect of the Company's crowd sale of the SilverBit tokens ("ICO") to be known as SilverBit Tokens. No shares or other securities of the Company are being offered for subscription or sale in any jurisdiction pursuant to the White Paper. The White Paper is being made publicly available for information purposes only and does not require any action to be taken by the general public or shareholders of the Company. The White Paper does not constitute an offer or invitation to any person to subscribe for or registration shares or any other securities in the Company. The shares of the Company are not being presently offered to be, registered under Securities Act of any country, or under any securities laws of any state. No person is bound to enter into any contract or binding legal commitment in relation to the sale and purchase of SilverBit Tokens, and no cryptocurrency or other form of payment is to be accepted on the basis of this White Paper. ELIGIBILITY You are not eligible and you are not to purchase any SilverBit Tokens if you are a citizen or resident of a geographic area in which access to or ownership of the SilverBit Token is prohibited by applicable law, decree, regulation, treaty, or administrative act. THE TOKENS REFERRED TO IN THIS WHITE PAPER HAVE NOT BEEN REGISTERED, APPROVED, OR DISAPPROVED BY THE US SECURITIES AND

EXCHANGE COMMISSION, ANY STATE SECURITIES COMMISSION IN THE UNITED STATES OR ANY OTHER REGULATORY AUTHORITY NOR ANY OF THE FOREGOING AUTHORITIES EXAMINED OR APPROVED THE CHARACTERISTICS OR THE ECONOMIC REALITIES OF THIS TOKEN OFFERING OR THE ACCURACY OR THE ADEQUACY OF THE INFORMATION CONTAINED IN THIS WHITE PAPER UNDER, THE U.S. SECURITIES ACT OF 1933 AS AMENDED, OR UNDER THE SECURITIES LAWS OF ANY STATE OF THE UNITED STATES OF AMERICA OR ANY OTHER JURISDICTION. PURCHASERS OF THE TOKENS REFERRED TO IN THIS WHITE PAPER SHOULD BE AWARE THAT THEY BEAR ANY RISKS INVOLVED IN THE REGISTRATION OF TOKENS, IF ANY, FOR AN INDEFINITE PERIOD OF TIME.

The purpose of this White Paper is to present the SilverBit token to potential token holders in connection with the proposed ICO. The information set forth may not be exhaustive and does not imply any elements of a contractual relationship. Its sole purpose is to provide relevant and reasonable information to potential token holders in order for them to determine whether to undertake a thorough analysis of the company with the intent of acquiring SilverBit Tokens. Nothing in this White Paper shall be deemed to constitute a prospectus of any sort or a solicitation for investment, nor does it in any way pertain to an offering or a solicitation of an offer to buy any securities in any jurisdiction. This document is not composed in accordance with, and is not subject to, laws or regulations of any jurisdiction, which are designed to protect investors. The product token is not a digital currency, security, commodity, or any other kind of financial instrument and has not been registered under the Securities Act, the securities laws of any state of the United States or the securities laws of any other country, including the securities laws of any jurisdiction in which a potential token holder is a resident. This English language White Paper is the primary official source of information about SilverBit Tokens. The information contained herein may from time to time be translated into other languages or used in the course of written or verbal communications with existing and prospective customers, partners etc. In the course of such translation or communication some of the information contained herein may be lost, corrupted, or misrepresented. The accuracy of such alternative communications cannot be guaranteed. In the event of any conflicts or inconsistencies between such translations and communications and this official English language White Paper, the provisions of this English language original document shall prevail. ² No offer of securities SilverBit tokens cannot be used for any purposes other than as provided in this White Paper, including but not limited to, any investment, speculative or other financial purposes. SilverBit Tokens confer no other rights in any form, including but not limited to any ownership, distribution (including, but not limited to, profit), redemption, liquidation, property (including all forms of intellectual property), or other financial or legal rights, other than those specifically set forth. SilverBit tokens confer no rights in the company and do not represent participation in the company. SilverBit tokens are sold as a functional utility. According to the professional opinion of our legal advisors, based on the Howey Test our SilverBit tokens (TOK) should not be

deemed as securities and do not need to be registered as a securities. SilverBit tokens are not securities. The user acknowledges, understands, and agrees that SilverBit tokens are not securities and are not registered with any government entity as a security, and shall not be considered as such. The User acknowledges, understands, and agrees that ownership of SilverBit token does not grant the User the right to receive profits, income, or other payments or returns arising from the acquisition, holding, management or disposal of, the exercise of, the redemption of, or the expiry of, any right, interest, title or benefit in the SilverBit platform or any other SilverBit property, whole or in part. SilverBit tokens are not official or legally binding investments of any kind.
